

AI Systems for Industrial Operations

Capture expertise. Automate workflows.
Put people back on the work that matters.

Three Problems Every Industrial Company Faces

01 Retiring Experts

Your most experienced operators and engineers are leaving — and taking decades of institutional knowledge with them. Nothing is written down.

02 Manual Processes

Critical workflows still run on spreadsheets, phone calls, and tribal knowledge. Every handoff is a risk. Every delay costs money.

03 No Documentation

When the regulator asks how decisions are made, you scramble. When a new hire starts, training takes months instead of weeks.

From Problem to Production in Five Steps

01**Find the Opportunity**

A focused conversation to pick the problem that delivers ROI fastest.

1 DISCOVERY CALL

02**Map the Workflow**

We map the current process end to end before writing a line of code.

1-2 WEEKS

03**Build the System**

A working system with your actual data, audit logging, and human override.

4-8 WEEKS

04**Deploy With Your Team**

We deploy alongside your team and stay until it's running in production.

2-4 WEEKS

05**Support & Expand**

Ongoing retainers for updates, retraining, governance, and expansion.

Why Industrial Companies Choose Novanix

01**Industrial experience, not tech-industry tourism.**

Our team comes from energy, construction, and industrial operations.

02**Governance is built in, not bolted on.**

Every system includes audit logging, human override, and documentation.

03**We solve problems that pay for themselves.**

If we can't show ROI within the first year, we'll tell you before we start.

**Your competitors are still
trying to figure out where to
start.**

You just found out.

Book a 30-minute discovery call. No pitch deck, no pressure. Tell us what's costing you time and money, and we'll tell you honestly whether AI can fix it.
